Welcome to O-leading

O-Leading strives to be your one stop solution partner in EMS supply chain, including PCB design, PCB fabrication and PCB assembly (PCBA),We provide some of the most advanced PCB technology, including HDI PCBs,multilayer PCBs, Rigid-Flexible PCBs.We can support from quick turn prototype to medium & mass Production.

In general, our global customers are very impressed with our services:Rapid response, competitive price and quality commitment.Providing more valuable technical service and overall solution is the way O-leading forward.

Looking to the future, O-leading will concentrate on the innovation and development of electronics manufacturing technology as always, and make persistent efforts on PCB & PCBA one-stop service to provide first-class services and create more value for our customers.

Product Description

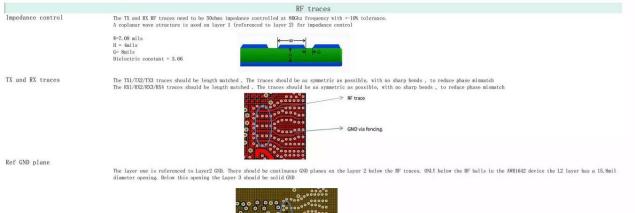

O-LEADING

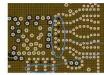

PCB with ROGERS and FR-4 two kinds raw material

O-LEADING

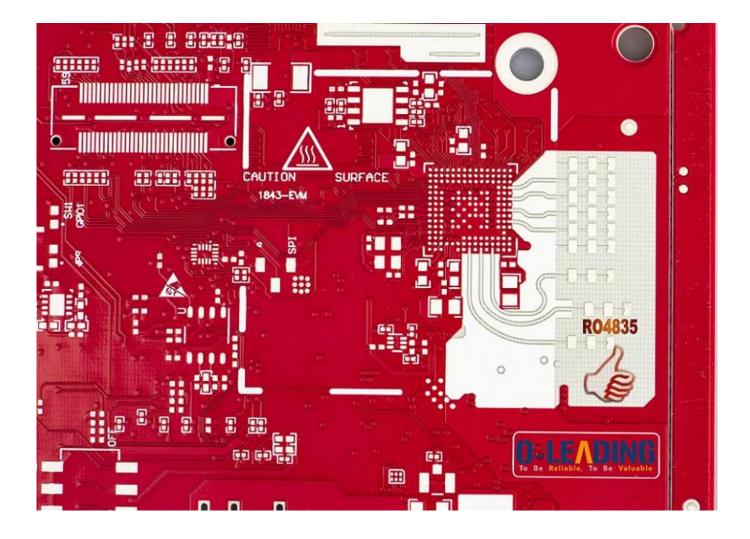

PCB with impedance control and mixed raw material of 370HR and Ro4835 LOPRO

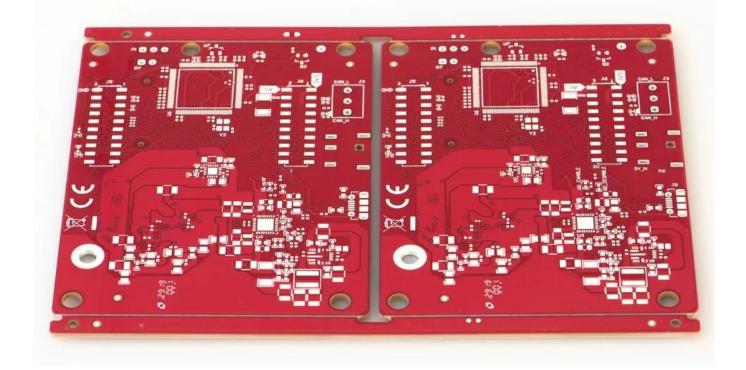

L2 layer opening just below the RF device bal. Diameter is 15.8 >>

Layer	Туре	CU Weight	CU %	Material Description	Via Structure	Segment	Glass Style	Material Family	Dielectric constant @ 1GHz	Thickness After lamination [mil]
Solderma	sk						4			0.80

Test Report

SGS

Test Report

No. SZXEC1900530401

Date: 30 Mar 2019 Page 2 of 6

Test Part Description :

Test Results :

Specimen No. SGS Sample ID Description SN1 SZX19-005304.001 Green"PCB"

Date: 30 Mar 2019 Page 1 of 6

The following sample(s) was/were submitted and identified on behalf of the clients as : OSP

No. SZXEC1900530401

SGS Job No. :	RP19-005089 - SZ
Date of Sample Received :	22 Mar 2019
Testing Period :	22 Mar 2019 - 30 Mar 2019
Test Requested :	Selected test(s) as requested by client.
Test Method :	Please refer to next page(s).
Test Results :	Please refer to next page(s).
Conclusion :	Based on the performed tests on submitted sample(s), the results of Lead. Marcury, Cadmium, Horavalent chromium, Polybrominated biphenyls (PBBs), Polybrominated diphenyl ethers (PBDEs) and Phthalates such as Big2-ethylhexyl) phthalate (DEHP), Butyl benzyl phthalate (BBP), Dbutyl phthalate (DBP), and Disobutyl phthalate (DBP) comply with the limits as set by RoHS Directive (EU) 2015/863 amending Annex II to Directive 2011/85/EU.

1313.FLOOR 13, FORTUNE BUILDING, DANSHUI TOWN, HUIYANG DISTRICT, HUIZHOU, GUANGDONG, CHINA

Process Capability

PCB Production Capabilities							
Layer Count	1Layer-32Layer						
Finished copper thickness	1/3oz-12oz						
Min Line width/spacing internal	3.0mil/3.0mil						
Min Line width/spacing external	4.0mil/4.0mil						
Max Aspect Ratio	10:1						
Board thickness	0.2mm-5.0mm						
Max Panel size(inches)	635*1500mm						
Minimum Drilled Hole Size	4mil						
Plated Hole Tolerance	+/-3mil YES						
Blind/Buried Vias (All Types) Via Fill(Conductive,Non-Conductive)	YES						
Base Material		aterial,Rogers,Aluminium base,Polyimide,Heavy Copper					
Surface finishes		ion silver, Immersion Tin, Gold fingers, Carbon ink					
		on siver, innersion migors, carbon mk					
SMT Production Capabilities							
PCB Material		FR-4,CEM-1,CEM-3,Aluminum-based board					
Max PCB size		510x460mm					
Min PCB size		50x50mm					
PCB Thickness		0.5mm-4.5mm					
Board thickness		0.5-4mm					
Min Components size		0201					
Standard chip size comp	onent	0603 and larger					
Component max height		15mm					
Min lead pitch		0.3mm					
Min BGA ball pitch		0.4mm					
Placement precision		+/-0.03mm

FAQ

1. How do O-Leading ensure quality?

Our high quality standard is achieved with the following.

1.1 The process is strictly controlled under ISO 9001:2008 standards.

1.2 Extensive use of software in managing the production process

1.3 State-of-art testing equipments and tools. E.g. Flying Probe, X-ray Inspection, AOI (Automated Optical Inspector) and ICT (in-circuit testing).

1.4.Dedicated quality assurance team with failure case analysis process

1.5.Continuous staff training and education

2. How do O-Leading keep your price competitive?

Over the last decade, prices of many raw materials (e.g. copper, chemicals) had doubled, tripled or quadrupled; Chinese currency RMB had appreciated 31% over US dollar; And our labor cost also increased significantly.

However, O-Leading have kept our pricing steady. This owns entirely to our innovations in reducing cost, avoiding wastes and improving efficiency. Our prices are very competitive in the industry at the same quality level.

We believe in a win-win partnership with our customers. Our partnership will be mutually beneficial if we can provide you an edgeon cost and quality.

3. What kinds of boards can O-Leading process?

Common FR4, high-TG and halogen-free boards, Rogers, Arlon, Telfon, aluminum/copper-based boards, PI, etc.

4. What data are needed for PCB & PCBA production?

4.1 BOM (Bill of Materials) with reference designators: component description, manufacturer's name and part number.

4.2 PCB Gerber files.

4.3 PCB fabrication drawing and PCBA assembly drawing.

4.4 Test procedures.

4.5 Any mechanical restrictions such as assembly height requirements.

5. What's the typical process flow for multi-layer PCB?

 $\begin{array}{l} \mbox{Material cutting} \rightarrow \mbox{Inner dry film} \rightarrow \mbox{inner etching} \rightarrow \mbox{Inner AOI} \rightarrow \mbox{Multi-bond} \rightarrow \mbox{Layer stack up Pressing} \rightarrow \mbox{Drilling} \rightarrow \mbox{PTH} \rightarrow \mbox{Panel Plating} \rightarrow \mbox{Outer Dry Film} \rightarrow \mbox{Pattern Plating} \rightarrow \mbox{Outer etching} \rightarrow \mbox{Outer AOI} \rightarrow \mbox{Solder Mask} \rightarrow \mbox{Component Mark} \rightarrow \mbox{Surface finish} \rightarrow \mbox{Routing} \rightarrow \mbox{E/T} \rightarrow \mbox{Visual Inspection.} \end{array}$

6. What's the key equipments for HDI manufacturing?

Key equipment list is as following: Laser drilling machine, Pressing machine, VCP line, Automatic Exposing machine, LDI and etc.

The equipments we have are the best in the industry, laser drilling machines are from Mitsubishi and Hitachi, LDI machines are from Screen(Japan), Automatic Exposing machines are also from Hitachi, all of them make we can meet customer's technical requirements.

7. How many types of surface finish O-lead can do?

O-the leader has the full series of surface finish, such as: ENIG, OSP, LF-HASL, gold plating (soft/hard), immersion silver, Tin, silver plating, immersion tin plating, carbon ink and etc. .. OSP, ENIG, OSP + ENIG commonly used on the HDI, we usually recommend that you use a client or OSP OSP + ENIG if BGA PAD size less than 0.3 mm.

8. What's your capability for FPC? Can O-Leading provide SMT service also?

O-Leading can fabricate FPC from single layer to 8layer, the working panel size can be as large as 2000mm*240mm, please find the details in the page "Flex Capability" We also provide SMT one stop service to customer.

9. What are the main factors which will affect the price of PCB?

Material; Surface finish; Technology difficulty; Different quality criteria; PCB characteristics; Payment terms; Different manufacturing countries.

10. What's the definition of PCB, PWB and FPC and what's the difference?

PCB is short for Printed Circuit Board; PWB is short for Printed Wire Board, same meaning as Printed Circuit Board; FPC is short for Flexible Printed Board.

11. What factors should be considered when choosing the material for a PCB board?

Below factors should be considered when we choose the material for PCB: The material's Tg value should be greater than the operation temperature; Low CTE material has good performance of thermal stability; Good thermal resistance performance: Normally PCBs are required to resist 250°C for at least 50s. Good flatness; In consideration of the electrical properties, low loss/high permittivity material is used on high frequency PCB; Polyimide glass fiber substrate used for flexible PCB; Metal core is used when the product has strict requirement of heat dissipation.

12. What's the merits of O-leading's rIgid-flex PCB?

O-leading's rigid-flex PCB has the characters of both FPC and PCB, so it can be used in some special products. Some part is flexible while the other part rigid, it can help save product's interior space, reduce product volume and improve performance.

13. How to you make the impedance calculation?

The impedance control system is done using some test coupons, the SI6000 soft and the CITS 500s equipment from POLAR INSTRUMENTS.

The equipment measures the impedance on a representative track configuration coupon of which the client has given us a determinate value and tolerance.
